

New child resistant closure

*Cases of poisoning
mainly affect the
children from 1 to 3
years of age*

*since they are still in the oral
stage of psychic
development and there is a
strong tendency to imitate
the behaviour of others
especially adults (e.g.,
mother or grandparents who
are taking drugs).*

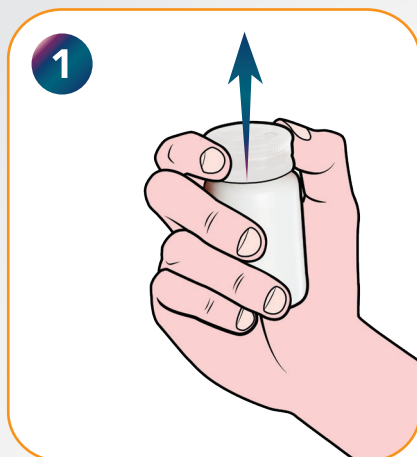

WHAT IS IT?

An innovative plastic closure with child-resistant features for pill bottles and boxes for the pharmaceutical and other industries.

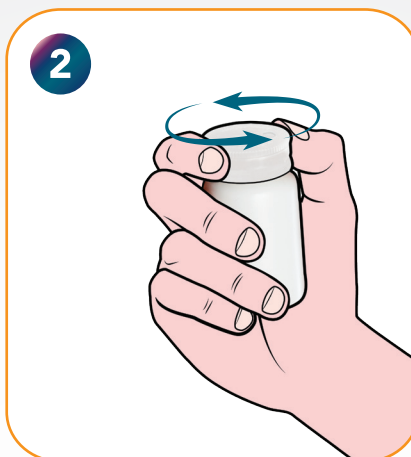

WHAT IS IT GOOD FOR?

The proposed product consists in an innovative closure for pill bottles or boxes that improves the characteristics of current systems.

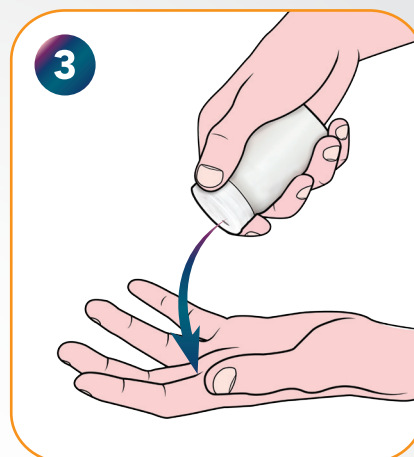

HOW TO USE IT IN ONLY 5 STEPS

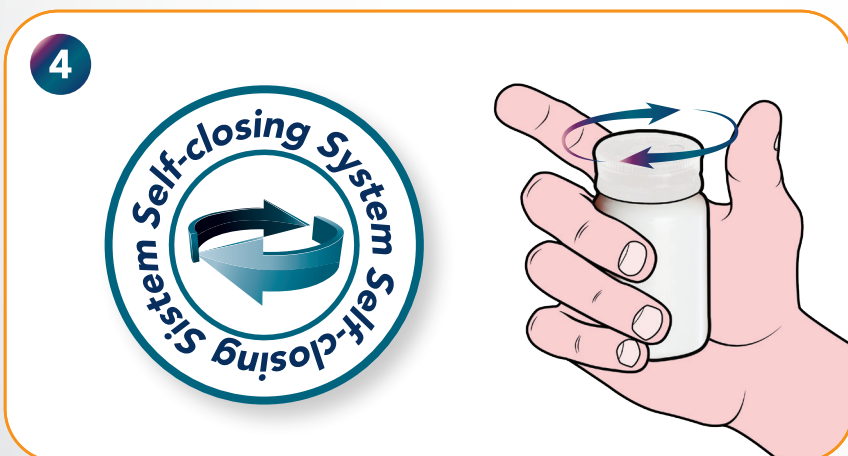

Lifting the lid

Rotating it

Delivery of the tablet

Releasing the lid the exit hole is automatically reclosed. (At this point, child resistance is already guaranteed)

Pressing the cover for additional closing of the bottle

- ▶ Automatic closure of the cover.
- ▶ Made from environmentally-friendly/recyclable materials.
- ▶ Designed to conform to the UNI EN 8317:2005 standard "Child-resistant packaging".
- ▶ The product has a simple design, appropriate for its intended use and its shape and colour can be customised.
